JAGANNADH K

SOFTWARE ENGINEER

New York, NY | 816-815-6344 | jagannadhk8@gmail.com | github.com/jagannadh-kommuri | linkedin.com/in/jagannadh-k08

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building backend, full-stack, cloud-native, distributed, and AI-enabled applications. Hands-on with Java and Spring Boot, C#, Python, React, and TypeScript, developing REST APIs, microservices, event-driven services, and data-driven applications across Azure and AWS. Experienced in SQL/NoSQL databases, Docker, Kubernetes, automated testing, CI/CD, monitoring, production troubleshooting, and performance optimization. Built production-oriented RAG features with Azure OpenAI, LangChain, Semantic Kernel, and vector databases supporting 500+ daily AI-assisted requests.

TECHNICAL SKILLS

Languages: Java, C#, Python, TypeScript/JavaScript, SQL | Additional: C++, Go, Ruby
Backend & Architecture: Spring Boot, REST APIs, Microservices, Distributed Systems, Event-Driven Architecture, OOP, Asynchronous Processing, System Design
Frontend: React, TypeScript, JavaScript, HTML, CSS
AI / Generative AI: Azure OpenAI, LangChain, Semantic Kernel, RAG, Embeddings, Qdrant, Chroma
Cloud & Data: AWS, Azure, Azure App Service, AKS, Azure Functions, Service Bus, SQL Server, PostgreSQL, MySQL, Azure SQL, Cosmos DB
DevOps & Operations: Linux, Docker, Kubernetes, Git, GitHub, Jenkins, Maven, CI/CD, Automated Testing, Monitoring, Incident Response, Root-Cause Analysis

PROFESSIONAL EXPERIENCE

Junior Software Engineer | Verizon **Feb 2025 - Aug 2026**
Overland Park, KS | Contract

- Developed distributed REST APIs and microservices in Java, Spring Boot, C#, and Python for customer account, service, and transaction workflows, implementing authentication, validation, structured error handling, and cloud-native deployment on Azure App Service and AKS.
- Built reusable React and TypeScript components for real-time customer data workflows, integrating backend REST APIs with asynchronous state handling to support responsive full-stack applications.
- Developed event-driven services with Azure Functions and Service Bus, using asynchronous processing, retry mechanisms, and reliable service-to-service communication for scalable application workflows.
- Optimized REST API and database performance by tuning backend processing and SQL queries, reducing application bottlenecks and improving performance by 30%.
- Implemented AI-powered search and knowledge features with Azure OpenAI, Semantic Kernel, LangChain, RAG, and Qdrant/Chroma, adding retrieval validation, prompt management, token tracking, monitoring, and access controls for 500+ daily AI-assisted requests.
- Improved production reliability through automated testing, telemetry, monitoring, debugging, incident investigation, and root-cause fixes; supported builds and releases with Git, GitHub, Jenkins, Docker, Kubernetes, and CI/CD.
- Collaborated with developers, QA, and product teams through code reviews, defect resolution, release validation, and Agile delivery to improve application quality across development and production environments.

Junior Software Engineer | Infosys **Jul 2022 - Jul 2023**
Hyderabad, India

- Developed Java and Spring Boot REST APIs and backend services, with Python, C#, JavaScript, and SQL supporting transaction processing, customer service requests, and database-driven application workflows.
- Supported production and pre-production applications across Azure, AWS, Docker, Kubernetes, and Linux, troubleshooting deployment, configuration, and environment-related issues.
- Optimized SQL queries and indexing and analyzed application logs to identify backend and database bottlenecks, working with developers and QA to resolve production defects.
- Automated build, testing, and deployment workflows with Git, GitHub, Jenkins, Maven, and CI/CD, reducing deployment and troubleshooting time by 25% while improving release consistency.

PROJECTS

AI-Powered Enterprise Knowledge Assistant | Python, Azure OpenAI, Semantic Kernel, LangChain, RAG, Qdrant, Chroma

- Developed REST APIs and RAG workflows for enterprise knowledge retrieval with authentication, retrieval validation, structured error handling, prompt management, token tracking, logging, monitoring, and access controls supporting 500+ daily AI-assisted requests.
- Designed embedding-based retrieval and vector search workflows using Qdrant and Chroma, integrating prompt management, response validation, and observability to improve the reliability of enterprise AI interactions.

Cloud-Native Customer & Billing Platform | Java, Spring Boot, C#, Azure Functions, Service Bus, Azure SQL, Cosmos DB, Docker, AKS

- Built Java/Spring Boot and C# microservices and REST APIs for customer, transaction, catalog, purchase, fulfillment, and billing workflows using cloud-native and event-driven architecture.
- Improved API performance by 35% through SQL query optimization, indexing, asynchronous processing, and backend service tuning, with monitoring, automated testing, and CI/CD.

EDUCATION & CERTIFICATIONS

M.S. in Computer Science | University of Central Missouri, Warrensburg, MO

Certifications

AWS Certified Solutions Architect - Associate (SAA-C03);
Programming Essentials in Python
OpenEDG; Java Programming – Great Learning; Deep Learning AI - Coursera
